

## Check-In

A PwC Product

# Make critical business decisions for your people — immediately

### The challenge

# 64%

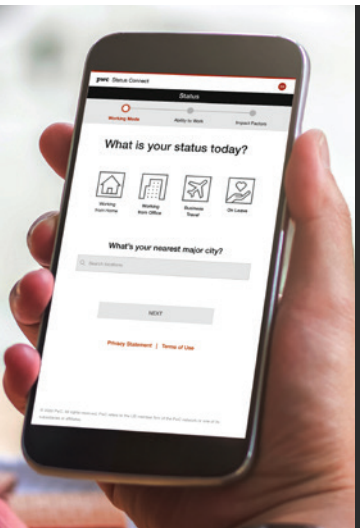

of companies do not have processes and systems in place to track all of their workforce.

Source: PwC, Covid-19 Navigator, as of March 25, 2020

### Our solution

What if you could maintain connection with your people, boost productivity and trust, and mitigate risks?

Check-In is a precision insights platform that keeps you connected to your people and provides a near real-time view of your workforce productivity and risk exposure, so you can quickly take action and reduce impact.

### Status Connect

Know what's happening with your people

Connect with and empower your people by giving them the ability to notify you about changing conditions. Get a real-time view of productivity and better understand daily work status so you can provide support exactly where it's needed.

Forecast and identify trends with accuracy and speed

Identify hot spots and trends by city or business unit to understand which issues are systemic and within your control; shift high-priority work as resource availability evolves.

### Automatic Contract Tracing

(Coming Q2)

Provide a lower-risk workplace

Quickly identify employees who may have come into contact with an impacted person in your workspace, allowing leadership to take immediate actions to limit the risk of further exposure.

Pinpoint exposures so you can target your response

Know precisely which employees have potential exposure so you can avoid shutting down operations or sending entire teams home in the absence of solid information about risk exposure.

### The Check-In difference

Build confidence, reduce risk and support your people—now

### Privacy-led design

We place user protection, privacy and trust above everything else. Access and retention controls further protect users and their data.

### Use tech you already have

Check-In is accessible on laptops, desktops, Android and iOS and does not require VPN. No additional hardware is required, and using location services means less battery drain.

### Provides transparency

Access precise proximity information with no incremental hardware or infrastructure, and receive near real-time information about whether your people may be at risk of exposure.

Be ready for now—and prepared for the future. Stay connected with your people, keep them in the know about exposure and make sure they have the resources and information they need to thrive, so you can help reduce risk to your business.

## How can *Check-In* help you help employees and mitigate risk?

### Pinpoint employee work modes

Understand where your people are working—remotely, from an office, in another location—in seconds. Identify those not able to work so you can deploy resources where they're needed.

### Realize blockers and impediments

Quickly spot daily and trending insights, and learn about productivity and technology blockers to drive decision making around technology deployments, HR policy changes and priority work reassignment.

### Fulfill your responsibility to your employees

Carry out your responsibility to your employees no matter the situation. Automatic contract tracing allows you to effectively and precisely identify employees when they may have come into contact with a contagious colleague.

### Maintain the privacy of your people

Collect proximity information anonymously. Information is not traced unless an authorized administrator is notified of a risk. Communication is decided on/maintained only by your company; PwC never makes contact with employees.

### View your people's status daily

Utilize the administrator's aggregated dashboard to learn more about check-ins by city and business unit, along with information regarding effectiveness and resource needs.

### Execute with speed and precision

Contain a crisis with critical speed and accuracy; every minute lost could be another person exposed. Authorized personnel in your company can receive a list of at-risk employees derived via the automatic tracing data.
